

DESIGNED TO MEET QUICK CHANGING DEMANDS

HIGH PERFORMANCE
TUBULAR EMBROIDERY MACHINES
SPRINT

THE ART OF EMBROIDERY

SPRINT. PROMOTION TO THE PROFESSIONAL LEAGUE

“Only the manufacturer who is familiar with the customers’ needs can design and construct a tailor-made machine!”

J.Thibodeau. Director ZSK, USA

The SPRINT made by ZSK is a compact embroidery machine of high industrial quality and with its weight of less than 80 kg perfectly suitable for speedy, mobile use. The new Sprint is thus one of the most light-weight models of its range and can easily be taken along. As it has been completely revised, the new Sprint now is one of the low-noise embroidery machines and can therefore be used in shops optimally. Basically, it is ideal for the production of patterns, solitary units and small series with ease of use feature.

Despite its compact structure, the SPRINT is an all-purpose embroidery machine offering the same precision and output like its big “brothers”, as almost no plastic components are used that are susceptible to wear and breakage. Above all, changeover is effected in no time for all embroidery applications such as cap embroidery, tubular applications and embroidering in single motif hoops. The use of the respective additional devices allows embroidering with sequins, cords and loops.

In combination with the excellent modular and expandable „BasePac“ software, the SPRINT machine is the ideal starter package for professional embroidery. ZSK and its selected distribution partners offer you the full package to satisfy your needs: comprehensive service, in-depth training and support in all embroidery related issues

THE ZSK SPRINT AT A GLANCE:

- Low-noise
- Light weight
- Embroidery Fields:
Caps: 70 x 360 mm
Tubular goods: 300 x 400 mm
Single motifs: 300 x 460 mm
- Embroidering speed:
1,200 stitches/min.
- Automatic error analysis
- Contour tracing with lowered needle
- Height adjustable presser foot
- Upper and lower thread stop motion
- Automatic thread cutter
- Automatic reverse embroidering function
- Up-to-date control unit “T8”
- Easy Windows-based networking
- Installed network interface card
- Integrated design editor
- All industry embroidery machine codes
- A wide range of accessories available
- USB-connection

LUCRATIVE PARTNERSHIP RIGHT FROM THE BEGINNING

The nature of a partnership usually becomes apparent after the purchase. Supported by our national partners in more than 100 countries, we from ZSK offer essential and useful services even before you buy the equipment.

For example, we help you selecting the machine configuration that is tailored to your needs and grant interesting financial support. After the purchase, you will be trained in operational and embroidery techniques and innovative and efficient applications will be shown to you.

Should it occur that spare parts are needed, we will supply original ZSK spare and wear parts quickly and conveniently.

„With my new embroidery machine I am part of the big, global ZSK family.“

George Crane,
Embroiderer from Dallas, USA
